

July 2014

## UPCOMING EVENTS

Molalla Giant Street Parade  
Friday, July 4th

Marion County Fair  
July 10th - 13th

Donald Hazelnut Festival  
Saturday, July 12th

Yamhill County Fair  
July 30th - August 2nd

## OVS Medford Increasing Size

*Thanks to great customer loyalty*

Thank you to our Southern Oregon customers for not only welcoming us to the region, but supporting our efforts to bring quality agricultural products and services to this unique growing region.

Since opening our Distribution Warehouse in Medford, we've increased staff and deliveries to Southern Oregon, and are now in the process of expanding our outdoor lot size to triple its current capacity. What this means is larger on-site inventory and lower internal freight costs, saving you money!

## Live-Approved Inspire Super a Great Value

**Inspire Super** from Syngenta is now included on the Yellow List from LIVE. **Inspire Super** is a dual purpose fungicide, effective against Powdery Mildew and Botrytis. It can be used on grapes, stone and pome fruits, and is a blended formulation of Difenconazole and Cyprodinil (Frac codes 3 & 9). Priced quite affordably per acre compared to other competitive dual action fungicides, **Inspire Super** offers growers the opportunity to save valuable dollars in the field. The next time you have a need to spray a fungicide treatment against both Powdery Mildew and Botrytis at timings such as bloom, berry touch, or veraison, consider **Inspire Super**. Available at OVS in 1 gallon jugs.

### Key Benefits

- *Combination product offering multiple modes of action*
- *High intrinsic activity against apple and pear scab*
- *Excellent IPM fit due to low use rates, application flexibility and low risk to beneficials*
- *Rapid uptake for excellent rainfastness*
- *Translaminar and systemic movement*
- *Powdery mildew and Botrytis control*
- *Reachback activity and good residual*
- *Re-entry interval (REI) of 12 hours*
- *14-day preharvest interval (PHI)*
- *No taint of wine*
- *No effect on fermentation*

## MacroBin Order Season is Here!

### NEW THIS YEAR

2% cash discount available  
on orders placed by 7/31  
and picked up by 10/31

Contact OVS Ag Supplies at 800-653-2216 for more information or visit [www.ovs.com](http://www.ovs.com) for size and pricing information.

# Grandevo - Effective Organic Pesticide

## Even for Conventional Growers

Introduced to the marketplace just last year by Marrone Bio Innovations, **Grandevo** is proving to be a powerful organic pesticide, catching the attention of conventional growers as well for its effective control of mites, thrips, leaf hoppers and other pests. Columbia Valley growers have shared with us recently that **Grandevo** has become a popular choice in their warmer climate region for battling mites and thrips, and may prove to be an option on the potential stink bug problem. They've experienced their best year of mite control by spraying 3lbs of Micronized Sulfur mixed with 1.5lbs of **Grandevo**.

Initially embraced by apple and cherry growers dealing in the fresh fruit market and well aware of the need for careful monitoring of pesticides and MRLs, **Grandevo** is growing in popularity with other crops as conventional growers seek effective organic pesticide options for their ease of application and environmentally friendly qualities.

OVS is proud to carry **Grandevo Advanced Bioinsecticide** in 5lb bags as an effective, affordable and farm-friendly option to help growers remain profitable and responsible farmers.

### Grandevo Highlights:

- Cross-spectrum protection against sucking and chewing insects and mites
- Activity against adults and nymphs
- Multiple modes of action
- No adverse effects on honey bee survival or brood development; honey bees may avoid treated plants for up to 48 hours
- 4-hour REI 0-day PHI
- Minimal personal protective equipment (PPE) requirements
- MRL tolerance exemption

## Farmer's Innovative Deer Control Tip

Deer pressure is something that many growers contend with each year. Nothing is more effective than a deer fence, but sometimes physical size, geographic limitations and financial pressures can limit our ability to do what we really would like to do to protect our crops.

We recently visited a large vineyard in Eastern Washington that was unable to fully enclose its property to fend off deer pressure and came up with an innovative and inexpensive alternative solution. Initially the vineyard planned to spray their property with organic scent

detractors, but concerns were raised by wine makers planning to purchase the harvested fruit that the aroma could possibly penetrate the winegrapes. After a little experimenting they found success by stringing electrical nylon fence tape around the perimeter of the vineyard and then applying a deer repellent scent directly to the tape. Although some deer damage still exists, it has been heavily reduced and reapplication of the repellent scent need only be done every 2-3 weeks, weather depending.

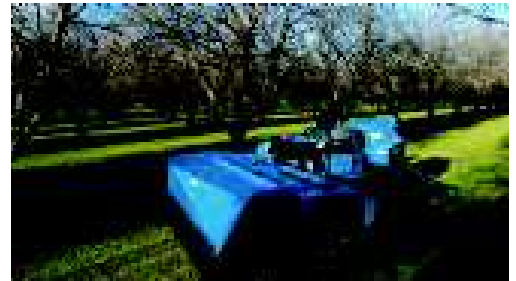

*OVS offers a variety of deer and bird control products. Electrical nylon fence tape currently available by special order only. Contact Ag Supplies for more information - 800-653-2216.*

## EQUIPMENT CORNER

Weiss McNair 836 Nut Harvester. 36" pick up, mud brush optional, new leaf hood has increased air velocity, front paddle wheels to prevent leaf pile-up

**Sale Price: \$43,600**

Weiss McNair JD40 Nut Sweeper. 5 bar rake heads, built in murphy switch protected, maneuverable, Yanmar 41HP diesel engine, lots of air

**Sale Price: \$41,500**

Gillison 20' pruning tower model GVF2110-12 SN. 2464 w/4 mph travel speed, Kubota 3 cylinder diesel engine, 15 gallon fuel tank, and designed for easy towing. **Sale Price: \$29,700**

Porter Orchard Boss 125D tractor w/ 125HP Perkins tier 3 engine, front and rear three point and PTO, tight turning radius, low 5'6" height, 40GPM hydraulic outlets, hydrostatic transmission with 10 programmable set speeds, 4wd, and much, much more. **Sale Price: \$96,900**
