Start November 2nd

Monday - Friday
8am - 5pm

Saturday
8am - Noon

November 2015

OVS Now Offering Financial Solutions

We are constantly on the lookout for innovative ways to provide extra value to customers choosing to do business with OVS. Some of the ways we do this is by offering high quality products and services; another example of this is offering our customers strong business strategies. With this thought in mind, OVS is happy to announce that we have partnered with John Deere Financial to offer our customers some exciting programs, designed to give you greater cash flow freedom. John Deere Financial purchased Farm Plan a few years ago. Farm Plan has commonly been used by growers in connection with their equipment needs, but now we are able to offer this financial flexibility to our Ag Supplies customers as well. This is a great program for those growers that see large income fluctuations such as harvest, or perhaps want to plan an expansion to their farm but would find it easier to spread the cost of trellising out over a few months versus having to pay for everything in full the following month. How do the programs work?

The **OVS Agronomic Deferred Payment Program** gives our growers the opportunity to buy all of their chemical and fertilizer needs throughout the season and defer the expense until December 2016. You are able to pay it off early without penalty when you have the funds available. By having this payment deferral option, perhaps it frees up immediate funds for other needs. And with only a 5% interest rate on any outstanding balance, you will find it is a very affordable tool for your business.

Are you thinking about expanding your fields and need to buy some trellising products or perhaps you really would like to add more Macrobins than perhaps your cash flow is comfortable with? **OVS Equal 8 Program** is designed for purchases of \$8,000 or more and offers the freedom to spread the costs out over 8 equal payments. What does it cost to use this program? Well, like our other program it would allow you to spread these larger purchases out of 8 monthly payments and it only cost you 5% APR on the outstanding balance.

So how do you take advantage of these new programs? Well if you already have a John Deere Financial Farm Plan in place, just let us know and we can connect these programs to your OVS account. Or, you can fill out a John Deere Financial credit application found on our website or available at each of our locations to open your account. If you have more questions, please give us a call and we will be happy to help you through the process to make these financial tools part of your program.

Planting Hazelnuts?

The Oregon hazelnut industry is one of several robust Oregon agriculture crops. We have seen an incredible growth and investment in filbert trees/hazelnuts due to its high performance and return on investment. OVS can supply all your farming needs for planting and maintaining your filbert trees; grower supplies, equipment, parts, service, guidance, and management.

OVS stocks and offers several styles of grow tubes. Plastic grow tubes continue to grow in popularity. OVS offers multiple options. We have black and white plastic corrugated Tree Guard in 12" by 16". We also carry a translucent peach color grow tube in 24 and 30 inches tall. For an economically priced option we carry paper milk carton in 12" and 20" sizes.

For training and supporting the young trees, we stock bamboo in 4', 5', and 6' pieces that are competitively priced by the bundle. If your needing steel training stakes for improved strength or organic certification approval, we have 3', 4', and 5' pencil rod in stock as well. We offer a variety of tying supplies such as tape, twist ties and clips to assist with your projects.

Deer pressure is always a concern with young planting. If you're in need OVS has your solution as well with a full line of high quality fencing material.

Is your soil ready for the new planting? OVS offers soil testing support and soil amendment material to prepare your field for greater success. Perhaps consider some pre-plant additions to the soil such as lime, gypsum, dolomite, mycorrhizae fungi, and humates/fulvics or other nutrient supplements. We have advanced far from the traditional basic NPK amendments & now know that plants and soil require more complex amendments for us to achieve the highest quality and most fruitful end product. OVS enjoys the benefit of having our own liquid fertilizer facility. We have formulated specialized liquid fertilizer such as our OVS Tree Builder that is formulated to the unique soils and growing conditions of the Willamette Valley. Because each region is unique, we have found exceptional benefits of adjusting these crop specific products to each region where Ph, salts and soil conditions vary greatly. Be it the high organic matter of the Willamette Valley, the heavy sodium conditions of the Columbia Basin, or the lower Nitrogen and Potassium soils in the Rogue Valley; no matter your soil challenges, OVS has many specialized fertilizers to help you be successful.

Need to prune your trees? OVS has your pruning needs covered with Felco, Bahco, and Campagnola brands providing manual, pneumatic & electronic pruners/loppers/saws. For larger projects we have Greenlee hydraulic loppers/saws accompanied with Gillison pruning towers as well.

And when it's finally time to be rewarded with your harvest, OVS is very experienced with offering and supporting Weiss McNair sweeper & harvesters as well as Kubota orchard tractors. Other tools include DeJong trailers, Domries scrapers, Rears, Air-O-Fan, or Gearmore Air-Blast orchard sprayers. Parts and Service for most makes & models. We stock over 500,000 parts and have mobile & emergency service trucks.

Are you currently growing or planning to become a successful hazelnut grower? As you can see, OVS is here to be a partner in your success and has many solutions to support your needs.

Nate Chambers - OVS Ag Supplies

New Product from Gripple!

Gripple's exciting new product is arriving soon at OVS. This innovative solution will provide a quick and easy way to manage fruiting wires by attaching directly to oil field pipe and wooden end posts. The Gripple VIT-S is an alternative to the use of catch wires chains. The hook design enables fruiting wires to be moved and/or dropped lower for pruning. They are releasable and can be re-tensioned and raised again for the new season.
